

With the Revo XXL DUO DMX, lighting designers have never had so many possibilities. Whether you want two different temperatures of white light in each section, or four different types of light, this light fixture can do it all. Plus, with individual control over each section, you can create truly unique lighting effects that will set your design apart from the rest. For example, choose two white light sections for a very warm look, and two blue sections to create impressive effects when desired.
