## About CLS

CLS is a Dutch manufacturer of high-quality LED lighting solutions. With **more than 35 years of experience** in professional lighting, and 20 years of expertise in LED production, we are a trusted partner for the demands of today's market. Our fixtures deliver the perfect solution for every project, thanks to bespoke configurations and the use of the finest components available.

One of CLS's key areas of expertise is the design and manufacture of lighting for offices, open-plan workplaces, meeting rooms and business premises across the globe. In close collaboration with international lighting designers, we have developed a wide range of LED fixtures, with specifications and applications that are perfectly tailored to creating pleasant and well-lit working environments.

## Designed for versatility and impact

At CLS LED, lighting is about more than visibility. It's about wellbeing, experience and performance. Our high-quality LED fixtures provide perfectly lit workspaces that inspire, motivate and save energy.

### Highlighted applications:

- > Offices, executive rooms and flexible workspaces
- > Meeting and presentation rooms
- > Showrooms and entrance areas
- > Education and healthcare facilities

## Human Centric Lighting

Good lighting influences our energy levels, our mood and our productivity. HCL supports the body's natural rhythm, with lighting that adapts in colour temperature and intensity throughout the day.

CLS LED applies HCL with advanced Tunable White technology. Our fixtures combine warm white and cool white LEDs within a single housing. By controlling these intelligently, we can replicate the natural progression of daylight. This dynamic approach helps employees perform better, feel more comfortable, and unwind more easily in the evening. It is particularly valuable in workplaces without natural daylight or for those working shifts.

## Sustainability

At CLS LED, we believe it is important to contribute to a better world and a cleaner planet. In our industry, with the products we provide, we can make a difference with every project in which our solutions are applied.

The modular design of our fixtures makes it possible to integrate multiple options within a single concept, creating the perfect fit for each project with easily replaceable components. With an average lifespan of 50,000 hours, fewer replacements and repairs are needed, reducing the use of natural resources, materials, energy and maintenance costs. Total Cost of Ownership (TCO) is further reduced thanks to our 5-year warranty on fixtures and a 10-year aftersales guarantee on spare parts.

### Discover the CLS LED difference

At CLS LED, we believe good lighting does more than simply illuminate. It creates atmosphere, enhances productivity and supports a healthy, enjoyable workplace. Our LED solutions combine advanced technology with sustainable design.

### > Sustainable & Energy-Efficient

Our fixtures are developed with maximum energy efficiency in mind. That means lower consumption, reduced costs and a minimal ecological footprint.

### > Comfort & Productivity

With optimal colour rendering and flicker-free technology, our lighting solutions provide visual comfort and reduce fatigue, enhancing both wellbeing and performance.

### > Smart lighting control

Seamlessly integrate our lighting into intelligent building management systems from daylight-dependent regulation to presence sensors.

### > Flexible & Modular

Every space is different. That's why CLS offers a wide range of fixtures and configurations, tailored to specific requirements, styles and applications.

### > Sustainably made in the Netherlands

CLS LED is proud of its Dutch heritage. Our fixtures are designed, manufactured and tested in-house to the highest quality standards.

### Flicker-Free LED Lighting for video and recording

In spaces where cameras are in use such as boardrooms, studios and training centres, stable lighting is essential. CLS LED fixtures are completely flicker-free, even when dimmed to low levels or when using Tunable White. This prevents disruptive image flicker, strobing and banding during video recording. The result: professional image quality, both live and on camera. Ideal for video conferencing, live streams, presentations and content production.

### Smart control for flexible lighting design

Modern office lighting requires systems that adapt to how spaces are used. CLS LED supports a variety of protocols including DALI, Casambi and DMX, enabling easy control by zone, time of day or activity. Tunable White, presence detection and daylight regulation can all be fully integrated. This allows lighting professionals to design not only energy-efficient but also dynamic and future-proof working environments.

### Take your brand identity beyond the interior

Give your building a striking presence with architectural lighting that reinforces your identity. The Revo fixtures combine sleek design with IP67 protection for long-lasting outdoor use. Choose from a range of beam angles, colour temperatures or dynamic RGBW lighting for maximum impact. Put your façade in the spotlight, stylish, versatile and fully weather-resistant.
